		Comments	
	(1)	Dessau airfield is occupied by a ground attack regiment equipped with about 50 Ni-10s.	
	(2)	A fence was being constructed along the southern and western sides of the field. The information that AA machine guns were emplaced in the AA gun emplacement is	
	****	received for the first time. It must be assumed that the operating personnel are	
		detached by the OATB. Previously, three AA cun emplacements, i.e. one each on the northern, southeastern and southwestern edges of the field have been believed to	
		exist at the field that only AA machine gums were emplaced in one of the southern emplacements on 25 July AA gums in the	25X1
	(10)	emplacement on the southern edge of the field on 25 and 30 July. Firing practices by AA guns at a sleeve target was previously reported from Dessau	23X I
	4443	airfield.
